Save Water, Save World

WATER CONSERVATION POLICY

World's population and only 4% of the world's water resources are available for use, and that too is depleting rapidly. The demand for water is expected to grow from 40 billion cubic metres (bcm) currently to around 220 bcm in 2025. The uneconomical and unethical use of water by human beings is the sole reason for the exploitation and deterioration of this valuable natural resource. Thus, both quality and quantity of water are at stake and have to be taken care of. It's the moral duty and social responsibility of each individual and community as a whole to contribute to conserve water and rejuvenate the water resources. In this direction, our institute has made efforts to ensure water conservation.

Objectives:

The institution has designed the water conservation policy to achieve the following objectives:

- To create awareness amongst students and staff members to prevent wastage of water.
- To educate housekeeping staff on reuse of water.

The Policies:

1. Awareness to students and staff members:

- The Nature's Club organizes events on importance of Water Conservation
- Nature's Club shall place posters in the college premises to educate the stakeholders to prevent the wastage of water.

2. Water Reuse by housekeeping :

- The non- contaminated(detergent free) water should be used for watering plants and other cleaning purposes.

Hence, the institution aspires to effectively minimize water wastage and its optimum utilization by conserving, filtering and reusing water by implementing the water conservation policy.
