**(Autonomous)**

Re-accredited by NAAC with B++, ISO 9001-2015 Certified, Recognised under section 2(f) & 12(B) of the UGC Act 1956

*Permanently Affiliated to the University of Mumbai,*

## **Syllabus**

# **Bachelor of Science in Artificial Intelligence & Machine Learning**

**(B.Sc. AI & ML )**

**(Semester I and II)**

**(Programme Code: )**

**As Per New Education Policy (NEP) 2020**

*(To be implemented from the Academic Year 2026-2027)*

*Approved in the Academic Council Meeting held on 7<sup>th</sup> October 2025*

# INTRODUCTION OF THE PROGRAMME

## 1. Introduction

In the age of Artificial Intelligence (AI) and Data-Driven Technologies, the influence of intelligent computing systems on society is profound and transformative. From healthcare to finance, transportation to entertainment, AI and Machine Learning (ML) have become the driving forces of innovation, reshaping industries and redefining human-computer interactions.

The B.Sc. in Artificial Intelligence and Machine Learning program is designed to prepare students for this rapidly evolving technological landscape. The curriculum integrates core foundations of computer science with specialized knowledge in AI and ML, enabling students to gain both breadth and depth of expertise.

Aligned with the National Education Policy (NEP) 2020, this program emphasizes not just technical proficiency but also adaptability, critical thinking, and problem-solving skills. Students will engage with concepts of programming, mathematics for AI, data structures, algorithms, databases, computer networks, and software engineering, while progressively advancing into machine learning, deep learning, natural language processing, computer vision, robotics, reinforcement learning, explainable AI, and AI ethics.

Key Philosophy of the Program:

**Form Strong Foundations:** Build a deep understanding of computational, mathematical, and statistical principles that drive AI and ML.

**Nurture Innovation & Research:** Encourage problem-solving, creativity, and research in AI applications across diverse domains.

**Bridge Theory with Practice:** Provide extensive lab work, projects, and industry-linked activities to strengthen real-world AI & ML skills.

**Prepare for Industry & Academia:** Equip students to thrive in industry roles or pursue higher studies and research in AI, ML, and Data Science.

This program not only prepares students for cutting-edge careers in AI & ML but also fosters a mindset of lifelong learning, innovation, and ethical responsibility in deploying intelligent systems. Graduates will be well-positioned to pursue roles in software development, data science, AI engineering, business intelligence, research, and entrepreneurship.

## *2. Aims and Objectives*

**Understanding and Knowledge Base:** Develop a comprehensive knowledge of AI principles, machine learning algorithms, data-driven modeling, and applications of AI across industries.

**Analytical Abilities and Problem Solving:** Strengthen mathematical reasoning, analytical thinking, and computational approaches to solve real-world problems using AI techniques.

**Training in Emerging Technologies:** Provide exposure to modern AI frameworks, deep learning libraries, big data platforms, cloud-based AI services, and ethical considerations in AI deployment.

**Preparation for Post-Graduate Studies & Research:** Enable students to pursue advanced studies (M.Sc., M.Tech., MBA in AI/Analytics, or research programs) in AI, ML, or interdisciplinary fields.

**Professional Skillset Development:** Equip students with programming, data handling, visualization, and modeling skills necessary for careers in AI-driven industries.

**Independent and Collaborative Work:** Foster teamwork, leadership, and effective communication, enabling students to work both independently and collaboratively in AI project development.

## PROGRAM OUTCOME

**At the end of three-year B.Sc. AI & ML, the students will be able:**

- Demonstrate understanding of mathematical, statistical, and computational foundations of Artificial Intelligence and Machine Learning.
- Design and implement AI/ML models to solve real-world problems in domains such as healthcare, finance, education, and smart systems.
- Apply data preprocessing, visualization, and exploratory data analysis techniques for effective decision-making.
- Utilize modern AI & ML libraries, tools, and frameworks such as TensorFlow, PyTorch, Keras, Scikit-learn, and OpenCV for building intelligent systems.
- Develop and deploy AI-driven applications in areas such as Natural Language Processing, Computer Vision, Robotics, and Predictive Analytics.
- Recognize the ethical, social, and legal implications of AI, ensuring fairness, transparency, and accountability in intelligent systems.
- Work effectively in teams, manage projects, and communicate findings clearly in both technical and non-technical contexts.
- Engage in continuous learning, keeping pace with advancements in AI, ML, Data Science, and related technologies.
- Exhibit professional competence and readiness for careers in AI engineering, data science, business analytics, or entrepreneurial ventures.
- Pursue higher studies and research in Artificial Intelligence, Machine Learning, Data Science, or interdisciplinary areas of computing.

## **ELIGIBILITY CRITERIA FOR ADMISSION**

The eligibility for admission to the B.Sc. Artificial Intelligence and Machine Learning (AI & ML) programme shall be as per the rules and regulations laid down by the University of Mumbai.

### **1. Duration of the Programme**

- The B.Sc. AI & ML programme shall be a Three-Year Degree Course, conducted in six semesters, in accordance with the Choice Based Credit System (CBCS) and National Education Policy (NEP) 2020 framework.

### **2. Eligibility for Admission**

- A candidate for being eligible for admission to the B.Sc. AI & ML degree programme shall have passed the Higher Secondary School Certificate (HSC) Examination (Std. XII) in Science stream conducted by the Maharashtra State Board of Higher Secondary Education or an examination recognized as equivalent thereto, with Mathematics as compulsory subjects.

**Candidates who have passed the Diploma in Engineering/Technology (recognized by the Board of Technical Education, Maharashtra State or equivalent) are also eligible for admission to the First Year of the programme.**

# SEMESTER I

## COURSE STRUCTURE

VERTICAL		COURSE CODE	SUBJECT	CREDIT
Vertical 1	Major	NUAM101	Python Programming	2
	Major	NUAM102	Artificial Intelligence & Machine Learning Fundamentals	2
	Major	NUAM103	Mathematics for AI & ML - I	2
Vertical 2	Minor	***		
Vertical 3	OE1	NUAM104	Indian Financial Systems	2
	OE2	NUAM105	Social Media and Communication	2
Vertical 4	VSC	NUAM106	Web Designing - Lab	2

## Mandatory Courses

### Name of the Course: Python Programming

Sr. No.	Heading	Particulars
1	Description the course:	<ul style="list-style-type: none"><li>• <b>Introduction:</b> Python has emerged as a fundamental language in the tech industry, valued for its simplicity, versatility, and readability. Its wide range of applications—from web development and data analysis to artificial intelligence and automation—has made it highly relevant and increasingly in demand across various domains. This introduction highlights Python's practical utility and its growing significance in today's technology-driven landscape.</li><li>• <b>Relevance and Usefulness:</b> Python's adaptability has made it a key player across various sectors—including web development, data science, and automation—cementing its role in today's rapidly evolving tech environment. Its user-friendly syntax, combined with a vast collection of libraries, empowers developers to solve problems efficiently and streamline development processes with ease.</li><li>• <b>Applications:</b> Python is widely applied in web development using frameworks like Django, in data science through powerful libraries such as NumPy and Pandas, and in cutting-edge fields like IoT and blockchain, making it a versatile tool across traditional and emerging technologies.</li><li>• <b>Interest and Connection with Other Courses:</b> Python's beginner-friendly nature and wide-ranging interdisciplinary applications have made it one of the most sought-after programming languages, easily integrating into diverse academic courses and professional fields alike.</li><li>• <b>Demand in the Industry:</b> With industries increasingly relying on Python for web development, data analysis, machine learning, and automation, there is a rising demand for professionals skilled in Python programming to meet these evolving technological needs.</li><li>• <b>Job Prospects:</b> Professionals proficient in Python programming have strong career prospects, with opportunities spanning roles such as web developers, data analysts, and data scientists—highlighting the language's versatility and sustained demand across the tech industry.</li></ul>
2	<b>Vertical:</b>	Major
3	<b>Type:</b>	Theory
4	<b>Credits:</b>	2 credits ( 1 credit = 15 Hours for Theory in a semester )
5	<b>Hours Allotted:</b>	30 Hours

6	<b>Marks Allotted:</b>	50 Marks
7	<b>Course Objectives:</b> 1. To Learn Programming fundamentals using Python. 2. To understand the concept of data types and other basic elements in python. 3. To learn control statements and operators in python. 4. To learn to write different functions and strings in python. 5. To understand the concept of dictionaries in python.	
8	<b>Course Outcomes:</b> CO 1. Ability to use variables with different data types and input output functions. CO 2. Ability to use control statements and operators in programming. CO 3. Proficiency in using function and strings. CO 4. Acquire knowledge of dictionaries.	
9	<b>Modules</b> <b>Module 1: Fundamentals of Python Programming (15 Hours)</b> 1. <b>Introduction to Python Language:</b> Overview and key features of Python, Execution process of Python programs, Internal architecture of Python, Concept of frozen binaries, Understanding the Python interpreter, Comparison of Python with C and Java, Installing Python and setting up the environment, Writing and executing Python code, Introduction to IDLE (Integrated Development and Learning Environment) 2. <b>Data Types, Variables, and Basic Elements:</b> Comments and docstrings, Data types: Numeric, compound, Boolean, dictionary, sets, and mappings, Fundamental elements of Python programming, Variable declaration and usage 3. <b>Input and Output Operations; Control Statements:</b> Using input functions and output statements, Handling command-line arguments, Control flow statements: loops (for, while), else clause in loops, Key control keywords: break, continue, pass, assert, and return 4. <b>Functions:</b> Defining and invoking functions, Returning single and multiple values, Utilizing built-in functions, Parameters and arguments handling, Recursive functions, Anonymous (lambda) functions <b>Module 2: Operators, Arrays, Strings, and Dictionaries (15 Hours)</b> 1. <b>Operators in Python:</b> Arithmetic, assignment, and unary minus operators, Relational and logical operators, Bitwise, membership, and identity operators, Operator precedence and associativity 2. <b>Arrays:</b> Creating and initializing arrays, Indexing, slicing, and basic array operations, Array processing and mathematical operations, Understanding aliasing in arrays, Advanced slicing and indexing in NumPy arrays, Array dimensions and key attributes 3. <b>Strings:</b> Creating and manipulating strings, String functions and methods, Indexing, slicing, concatenation, and repetition, Checking membership and comparison, Trimming spaces, finding and counting substrings, String immutability and transformations (splitting, joining, case changes), Checking start/end patterns, sorting, searching, and formatting 4. <b>Dictionaries:</b> Creating and managing dictionaries, Dictionary operators and methods, Using loops with dictionaries, Dictionary operations and ordered dictionaries	

10	<b>Text Books</b> <ol style="list-style-type: none"> <li>1. Programming through Python M. T. Savaliya, R.K Maurya, G.M Magar, Staredu Solutions, 1st edition (2018)</li> <li>2. # Name of the Course: Artificial Intelligence & Machine Learning Fundamentals

Sr. No.	Heading	Particulars
1	Description the course:	<p><b>Introduction:</b></p> <p>The <b>Artificial Intelligence (AI) &amp; Machine Learning (ML) Fundamentals</b> course introduces students to the core concepts, techniques, and applications that drive intelligent systems. This course covers the basics of AI, search strategies, problem-solving, and machine learning approaches, providing a foundation for students to understand how intelligent agents learn, adapt, and make decisions in dynamic environments.</p> <p><b>Relevance:</b></p> <p>In today's world, AI and ML are no longer futuristic concepts but practical technologies that shape industries such as healthcare, finance, transportation, e-commerce, and entertainment. This course enables students to grasp the significance of these technologies, making it highly relevant in the era of automation and data-driven decision-making.</p> <p><b>Usefulness:</b></p> <p>Students gain knowledge of fundamental AI problem-solving methods and the mathematical and logical foundations of ML algorithms. The course emphasizes conceptual clarity along with real-world illustrations, equipping learners with the skills to build intelligent systems and prepare datasets for model training.</p> <p><b>Application:</b></p> <p>The knowledge acquired in this course finds applications in numerous areas including <b>chatbots, recommendation systems, predictive analytics, computer vision, and natural language processing</b>. Students will learn how theoretical AI/ML concepts are transformed into applications that solve real-world challenges.</p> <p><b>Interest:</b></p> <p>Artificial Intelligence &amp; Machine Learning Fundamentals is both <b>theoretical and hands-on</b>, stimulating students' curiosity about how machines mimic human intelligence. The course sparks interest by showcasing simple yet powerful AI models and ML workflows that lead to exciting projects in gaming, smart assistants, and data-driven problem-solving.</p> <p><b>Connection with Other Courses:</b></p> <p>This course serves as a stepping stone to advanced courses such as <b>Machine Learning Techniques, Deep Learning, Natural Language Processing, Reinforcement Learning, and AI Ethics</b>. It also connects with mathematics courses (linear algebra, probability, statistics) and programming courses, ensuring a strong interdisciplinary foundation.</p> <p><b>Demand in the Industry:</b></p> <p>With AI/ML driving the future of work, industries worldwide seek professionals capable of developing, deploying, and optimizing intelligent systems. From startups to global enterprises, the demand for</p>

		<p>AI/ML skills is rapidly expanding, making this course industry-aligned.</p> <p><b>Job Prospects:</b></p> <p>Graduates proficient in AI/ML fundamentals can explore careers as <b>AI Engineer, Data Scientist, ML Developer, AI Research Assistant, and Business Intelligence Analyst</b>. These roles span across industries like IT, healthcare, fintech, autonomous systems, and education technology.</p>
2	<b>Vertical:</b>	<b>Major</b>
3	<b>Type:</b>	<b>Theory</b>
4	<b>Credits:</b>	<b>2 credits</b>
5	<b>Hours Allotted:</b>	<b>30 Hours</b>
6	<b>Marks Allotted:</b>	<b>50 Marks</b>
7	<p><b>Course Objectives:</b></p> <ol style="list-style-type: none"> <li>To understand the fundamentals of Artificial Intelligence and its role in problem-solving and decision-making.</li> <li>To learn basic search strategies, logic-based reasoning, and knowledge representation techniques.</li> <li>To introduce Machine Learning concepts, including supervised and unsupervised learning.</li> <li>To develop skills in data preprocessing, model building, and evaluation metrics.</li> <li>To gain exposure to real-world applications of AI/ML across different domains.</li> </ol>	
8	<p><b>Course Outcomes (CO):</b></p> <p><b>CO1:</b> Describe the basic concepts, history, and applications of Artificial Intelligence and Machine Learning.</p> <p><b>CO2:</b> Apply simple AI problem-solving techniques such as search strategies.</p> <p><b>CO3:</b> Differentiate between supervised, unsupervised, and reinforcement learning with real-world examples.</p> <p><b>CO4:</b> Demonstrate the working of basic ML algorithms like regression, classification, and clustering.</p> <p><b>CO5:</b> Discuss the challenges, limitations, and ethical aspects of AI and ML.</p>	
9	<p><b>Modules:-</b></p> <p><b>Module 1:Artificial Intelligence Fundamentals (15 hours):</b></p> <ol style="list-style-type: none"> <li><b>Introduction to AI</b> <ul style="list-style-type: none"> <li>Definition and Evolution of AI (from rule-based systems to modern AI)</li> <li>Applications in daily life: voice assistants, chatbots, recommendation systems, robotics</li> <li>Types of AI: Weak AI vs Strong AI, Narrow vs General AI</li> <li>Opportunities and Challenges in AI</li> </ul> </li> <li><b>Problem Solving and Search</b> <ul style="list-style-type: none"> <li>Concept of problem formulation: initial state, actions, goal state</li> </ul> </li> </ol>	

- State space and search trees (visual illustrations, puzzles like 8-puzzle, pathfinding)
- **Uninformed Search:** Breadth-First Search (BFS), Depth-First Search (DFS) – explained with flowcharts/examples
- **Informed Search:** Heuristic Search, A\* Algorithm (introduction with examples like Google Maps shortest path)
- Constraint Satisfaction Problems – simple examples (Sudoku, timetable scheduling overview)

### 3. Knowledge Representation & Reasoning

- Simple propositional logic and examples (“if-then” rules)
- Basic idea of predicate logic (illustrative, not mathematical depth)
- Rule-based systems and Expert Systems in practice (e.g., medical diagnosis)

### 4. Ethics in AI

- Bias and fairness issues with examples (biased hiring tools, facial recognition problems)
- Explainable AI (XAI) in simple terms
- Social impact: Privacy, accountability, automation & jobs

## Module 2: Machine Learning Fundamentals (15 hours) :

### 1. Introduction to ML

- What is ML? How it differs from traditional programming
- Types of ML: Supervised, Unsupervised, Reinforcement (with day-to-day examples like spam filter, customer segmentation, self-driving cars)
- ML Workflow: Data → Preprocessing → Model Training → Evaluation → Deployment
- Concept of overfitting and underfitting (using simple graphs/illustrations)

### 2. Supervised Learning

- **Regression:**
  - Linear Regression (predicting house price, student marks)
  - Logistic Regression (binary classification like pass/fail, spam detection)
- **Classification:**
  - K-Nearest Neighbors (KNN) with a simple diagram
  - Decision Trees – splitting criteria (Entropy, Gini) explained with examples (e.g., weather dataset)
- Hands-on case study (Iris dataset or simple numeric example – conceptual, no coding in exam)

### 3. Unsupervised Learning

- Clustering: K-Means (illustration with customer segmentation)
- Hierarchical clustering (basic concept with dendrogram idea)
- Dimensionality Reduction: Concept of PCA (only intuition, no math)

### 4. Reinforcement Learning & Emerging Trends

- Basics of RL: Agent, Environment, Reward, Policy (game-based examples like chess, tic-tac-toe, self-driving car simulation)

- Q-Learning (conceptual explanation only)
- Emerging trends: Generative AI (ChatGPT, DALL·E), Ethical AI, Edge AI

	<ul style="list-style-type: none"> <li>• Q-Learning (conceptual explanation only)</li> <li>• Emerging trends: Generative AI (ChatGPT, DALL·E), Ethical AI, Edge AI</li> </ul>

## Name of the Course: Mathematics for AI & ML – I

Sr.No.	Heading	Particulars
1	<b>Description the course:</b>	<ul style="list-style-type: none"> <li>• Introduction: This subject introduces the fundamental mathematical tools of linear algebra and probability, which form the backbone of modern Artificial Intelligence (AI) and Machine Learning (ML). Concepts such as vectors, matrices, eigenvalues, and probability distributions provide the foundation for data representation, transformation, and modeling of uncertainty.</li> <li>• Relevance and Usefulness: Linear Algebra is essential for handling large datasets, dimensionality reduction, and representation learning. Probability equips students with skills to model uncertainty, randomness, and statistical inference, which are crucial in predictive modeling. Both topics are indispensable in understanding core ML algorithms and AI systems.</li> <li>• Applications: Dimensionality reduction using PCA in image processing and NLP. Naïve Bayes classifier in spam detection and text classification. Probabilistic reasoning in Bayesian networks and generative AI models. Eigenvalue methods in recommendation systems and clustering.</li> <li>• Interest and Connection with Other Courses: Builds the mathematical foundation for Machine Learning, Deep Learning, and Data Mining. Strongly connected to Statistics, Computer Vision, and Natural Language Processing (NLP) courses. Provides necessary tools for Data Science practicals using Python, R, and MATLAB.</li> <li>• Demand in the Industry: Probability and linear algebra are heavily used in data analysis, AI model development, and financial analytics. Companies such as Google, Meta, Amazon, and Microsoft rely on these concepts in search, recommendation, and predictive systems.</li> <li>• Job Prospects: Roles like Data Analyst, Machine Learning Engineer, AI Researcher, and Quantitative Analyst demand strong foundations in linear algebra and probability. Essential for jobs in data-driven industries such as fintech, healthcare analytics, robotics, and AI startups.</li> </ul>
2	<b>Vertical:</b>	Major
3	<b>Type:</b>	Theory
4	<b>Credits:</b>	2 credits ( 1 credit = 15 Hours for Theory in a semester )
5	<b>Hours Allotted:</b>	30 Hours
6	<b>Marks Allotted:</b>	50 Marks
7	<b>Course Objectives (CO):</b> By the end of this course, the student will be able to:	<ol style="list-style-type: none"> <li>1. Provide students with a solid foundation in linear algebra concepts such as vectors, matrices, eigenvalues, and decompositions.</li> <li>2. Introduce the principles of probability and statistics for modeling uncertainty and randomness.</li> <li>3. Develop analytical and problem-solving skills required for data representation and</li> </ol>

	<p>probabilistic reasoning.</p> <p>4. Relate linear algebra and probability concepts to AI/ML applications such as PCA, Naïve Bayes, and probabilistic models.</p>
8	<p><b>Course Outcomes (CO):</b></p> <p>On successful completion of this course, the student will be able to:</p> <p>CO1. Apply linear algebra concepts to data transformation, dimensionality reduction, and feature extraction in ML.</p> <p>CO2. Use probability theory and statistical measures to analyze and interpret data distributions.</p> <p>CO3. Apply Bayes' theorem and random variable modeling to develop probabilistic learning algorithms.</p> <p>CO4. Integrate linear algebra and probability concepts in solving real-world AI/ML problems such as classification and clustering.</p>
9	<p><b>Modules</b></p> <p><b>Module 1: Linear Algebra for AI (15 Hrs)</b></p> <ul style="list-style-type: none"> <li>• Vectors (2 Hours): <p><b>Definition, vector operations (addition, scalar multiplication, dot/cross product), Norms (<math>L_1</math>, <math>L_2</math>, <math>L_\infty</math>) and geometric interpretation</b></p> </li> <li>• Matrices (2 Hours): <p><b>Types of matrices (identity, diagonal, symmetric, orthogonal) and properties, Matrix operations: transpose, determinant, inverse, transformations</b></p> </li> <li>• Rank of a Matrix (2 Hours): <p><b>Concept of rank, row rank = column rank, Rank-nullity theorem and computation (Gaussian elimination)</b></p> </li> <li>• Eigenvalues &amp; Eigenvectors (3 Hours): <p><b>Definition, characteristic equation, and computation, Diagonalization and properties of eigenvalues/eigenvectors</b></p> </li> <li>• Singular Value Decomposition (SVD) (2 Hours): <p><b>Concept of SVD and relation to eigen decomposition, Geometric interpretation (orthogonal transformations)</b></p> </li> <li>• Orthogonality &amp; Projections (2 Hours): <p><b>Orthogonal vectors, orthogonal matrices, Gram–Schmidt process, Vector projection onto subspaces, projection matrices</b></p> </li> <li>• Principal Component Analysis (PCA) (2 Hours): <p><b>Motivation and steps (standardization, covariance matrix, eigen decomposition), Dimensionality reduction and variance maximization</b></p> </li> </ul>

**Module 2: Probability & Statistics (15 Hrs)**

- **Probability Basics (2 Hours):**  
Classical and conditional probability, addition and multiplication rules, Independence of events and law of total probability
- **Random Variables (2 Hours):**  
Definition of discrete and continuous random variables, Probability mass function (PMF) & probability density function (PDF)
- **Distributions (3 Hours):**  
Common distributions: Bernoulli, Binomial, Poisson (discrete), Normal, Exponential, Uniform distributions (continuous)
- **Bayes' Theorem (2 Hours):**  
Statement and derivation of Bayes' theorem, Prior, likelihood, posterior, and evidence
- **Expectation & Variance (2 Hours):**  
Expected value and its properties, Variance, standard deviation, covariance, correlation
- **Hypothesis Testing (2 Hours):**  
Null and alternative hypotheses, Type I & Type II errors, t-test, chi-square test, p-value interpretation
- **ML Applications of Probability & Statistics (2 Hours):**  
Probabilistic models in ML (Naïve Bayes, HMMs, Bayesian inference), Statistical measures for model evaluation (confidence intervals, z-scores)

## Open Elective (OE)

### Name of the Course: Indian Financial System

Sr. No.	Heading	Particulars
1	<b>Description the course:</b>	<p>This course provides a comprehensive introduction to the Indian financial system, offering foundational knowledge of its structure, components, and functioning. It delves into the role of banks and other financial institutions in economic development and explores various banking services available to individuals and businesses. The course also introduces students to the basics of insurance and personal financial planning, enabling them to make informed financial decisions and develop sound saving and investment strategies.</p> <p>Through real-world examples, case studies, and practical insights, students will gain a deeper understanding of how financial instruments, services, and institutions interact to support the financial stability of individuals and the economy.</p>
2	<b>Vertical:</b>	<b>Open Electives</b>
3	<b>Type:</b>	<b>Theory</b>
4	<b>Credits:</b>	<b>2 credits</b>
5	<b>Hours Allotted:</b>	<b>30 Hours</b>
6	<b>Marks Allotted:</b>	<b>50 Marks</b>
7	<b>Course Objectives:</b>	<ol style="list-style-type: none"><li>1. Understand the basic structure and role of the Indian financial system in the economy.</li><li>2. Identify the key functions of banks and the services they offer to individuals.</li><li>3. Recognize the importance of the Reserve Bank of India (RBI) as a regulatory authority.</li><li>4. Explain the concept of insurance and its relevance in personal financial planning.</li><li>5. Develop basic awareness of saving, budgeting, and investment as essential financial habits.</li></ol>
8	<b>Course Outcomes:</b>	<p><b>After completing this course, students will have the knowledge and skills to</b></p> <p>CO1. Describe the structure and components of the Indian financial system.</p> <p>CO2. Explain the roles and functions of various banking institutions and the regulatory framework.</p> <p>CO3. Understand the concept and significance of insurance in financial planning.</p> <p>CO4. Gain awareness of essential financial habits such as saving, budgeting, and basic investment concepts.</p> <p>CO5. Build a foundational understanding of financial services relevant to individuals in everyday life.</p>

## Name of the Course: Social Media and Communication

Sr. No.	Heading	Particulars
1	<b>Description of the course :</b>	This course offers a comprehensive overview of the evolution, structure, and impact of social media from its early platforms to the modern digital ecosystem. Students will explore the historical development of social media, the rise of mobile-based platforms, and the societal transformations driven by these technologies. The course also examines contemporary trends, including algorithmic curation, data privacy, ethical concerns, and the growing role of AI and machine learning in shaping digital interactions. Emphasis is placed on the application of social media in academic, professional, and interpersonal communication, equipping students with both theoretical understanding and practical insight.
2	<b>Vertical :</b>	<b>Open Electives</b>
3	<b>Type :</b>	<b>Theory</b>
4	<b>Credit:</b>	<b>2 credits</b>
5	<b>Hours Allotted :</b>	<b>30 Hours</b>
6	<b>Marks Allotted:</b>	<b>50 Marks</b>
7	<b>Course Objectives:</b>	<ol style="list-style-type: none"> <li>1. <b>To introduce</b> students to the evolution and historical development of social media platforms and digital communication tools.</li> <li>2. <b>To familiarize</b> students with modern social media platforms, their key features, and their influence on communication, culture, and society.</li> <li>3. <b>To explore</b> the role of algorithms, artificial intelligence, and machine learning in shaping user experiences on social media.</li> <li>4. <b>To sensitize</b> students to issues of digital ethics, data privacy, and the responsible use of social media.</li> <li>5. <b>To enable</b> students to critically assess the use of social media in academic, interpersonal, and professional settings.</li> </ol>
8	<b>Course Outcomes:</b>	<p>By the end of this course, <b>students will be able to:</b></p> <p>CO1. Describe the historical evolution and foundational concepts of social media platforms and their societal impact.</p> <p>CO2. Analyze the features and influence of major modern social media platforms, including their role in shaping digital interactions.</p> <p>CO3. Evaluate the ethical, privacy, and algorithmic challenges associated with social media usage in contemporary digital society.</p> <p>CO4. Apply knowledge of social media tools and technologies in academic, interpersonal, and professional contexts.</p>

9	<b>Modules:-</b>

## Vocational Skill Courses (VSC)

### Name of the Course: Web Designing - Lab

Sr. No.	Heading	Particulars
1	Description the course:	<p><b>Introduction:</b> The Web Designing Course is an immersive exploration into the core technologies that drive the visual and interactive aspects of the web. Covering HTML, CSS, Javascript, XML, and PHP, this course equips individuals with the skills needed to create dynamic and aesthetically pleasing websites.</p> <p><b>Relevance:</b> In the digital age, web design is paramount. The course remains highly relevant as it introduces participants to the fundamental languages and technologies that form the backbone of modern web development.</p> <p><b>Usefulness:</b> The course is invaluable for anyone interested in creating responsive, user-friendly, and visually appealing websites. Participants gain practical skills in structuring web content, styling layouts, and implementing interactive features.</p> <p><b>Application:</b> The concepts learned in this course find direct application in real-world web development projects. Participants design and build websites, applying HTML for structure, CSS for styling, Javascript for interactivity, XML for data representation, and PHP for server-side scripting.</p> <p><b>Interest:</b> The creative and hands-on nature of web design often captivates students. Through practical exercises, participants engage in designing and developing websites, fostering a deep interest in creating visually engaging online experiences.</p> <p><b>Connection with Other Courses:</b> This course establishes strong connections with various other courses in the field of web development and computer science. It provides a foundation for advanced studies in full-stack development, database management, and server-side scripting.</p> <p><b>Demand in the Industry:</b> Professionals with strong web designing skills are in high demand. Industries spanning e-commerce, technology, and media actively seek individuals who can create user-friendly and visually appealing websites to enhance online presence and user engagement.</p> <p><b>Job Prospects:</b> Graduates from a Web Designing Course find diverse job prospects. Roles may include web designer, front-end developer, UI/UX designer, and web content manager. These professionals are sought after for their ability to create visually stunning and functional web interfaces.</p>
2	Vertical:	VSC
3	Type:	Practical
4	Credits:	2 credits ( 1 credit = 15 Hours of Practical work in a semester )
5	Hours Allotted:	30 Hours

6	<b>Marks Allotted:</b>	50 Marks
7	<b>Course Objectives:</b> <ol style="list-style-type: none"> <li>1. To understand the concept of Web Technologies</li> <li>2. To understand the concepts of Hyper Text Markup Language and Cascading Style Sheets.</li> <li>3. To learn JavaScript for creating dynamic websites.</li> <li>4. To learn various operations performed on data among web applications using XML</li> <li>5. To learn Server-Side Programming using PHP</li> </ol>	
8	<b>Course Outcomes:</b> <ol style="list-style-type: none"> <li>1. Design valid, well-formed, scalable, and meaningful pages using emerging technologies.</li> <li>2. Understand the various platforms, devices, display resolutions, viewports, and browsers that render websites</li> <li>3. Develop and implement client-side and server-side scripting language programs.</li> <li>4. Develop and implement Database Driven Websites.</li> <li>5. Design and apply XML to create a markup language for data and document centric applications.</li> </ol>	
9	<b>Modules:-</b> <b>Module 1 (15 hours):</b>	
	<b>Module I:</b>  <b>Concepts:</b> Internet and the World Wide Web: What is Internet? Applications of Internet, internet related concepts. HTML 5: Getting started with HTML, Doctypes, Headings, Paragraphs, Text Formatting, Anchors and Hyperlinks, Lists, Tables, Comments, Classes and IDs, Linking Resources, Images, Image Maps. HTML OTHER ELEMENTS: Input Control Elements, Forms, Div Element, Sectioning Elements, Navigation Bars, Label Element, Output Element, Void Elements, Media Elements, Progress Element, Selection Menu Controls, Embed, IFrames, SVG, Canvas, Tabindex. CSS: Implementing Styles using CSS – Stylesheets, Formatting Text and Links using CSS, CSS Selectors, Changing Background, Adding Border, Margin and Padding, Setting Dimensions, Using Inline Container to mark up a part of a text.  <u><b>Programs to be completed during lab sessions :</b></u> <b>1. Create a Personal Web Page</b> Design a personal webpage with your name, photograph, short bio, and links to your social media profiles. Use appropriate headings, paragraphs, text formatting, hyperlinks, and images. <b>2. Design a Student Registration Form</b> Create a form using various input controls (text, email, password, radio buttons, checkboxes, dropdown, etc.). Organize the form using <fieldset>, <legend>, <div>, and <section>. Include labels and use the required attribute. <b>3. Build a Responsive Navigation Bar with Embedded Media</b> Design a webpage with a horizontal navigation bar using <nav>. Embed a YouTube video using <iframe>, include an audio clip using <audio>, and add a Google Map using <embed>. <b>4. Apply CSS Styling to a Multi-Section Webpage</b> Create a webpage with at least three sections and apply an external CSS file to: <ul style="list-style-type: none"> <li>• Change fonts and text color</li> <li>• Set background images/colors</li> <li>• Add padding, margins, and borders</li> <li>• Style links and headings</li> </ul> <b>5. Create a Canvas and SVG Drawing</b> Use the <canvas> element and JavaScript to draw a rectangle, circle, and line. Additionally, use an inline <svg> to draw a star or a basic geometric shape.	

**Mini-Assignment:**

**Title:** "Designing a Multi-page Portfolio Website using HTML5 and CSS"

**Assignment Description:**

Design a personal portfolio website with **minimum 3 interlinked pages** using HTML5 and CSS.

The pages should include:

- **Home Page** – with your photo, introduction, and navigation bar
- **Projects Page** – showcasing 2–3 projects using tables and images
- **Contact Page** – a form for visitors to contact you (with input fields, radio buttons, dropdown, etc.)

**Requirements:**

- Use of <header>, <footer>, <section>, <article>, <nav>, <div>, and <aside>
- Apply **external CSS** to style text, layout, background, margins, and borders
- Include **at least one embedded video or audio file**

Use **responsive images and hyperlinks**

**Module 2 (15 hours):****Module II:**

**Concepts:** Java Script Events and Event Handlers: HTML Events, DOM Events, DOM Event Listener, onAbort, onBlur, onChange, onClick, onDbClick, onError, onFocus, onKeyDown, onKeyPress, onKeyUp, onLoad, onMouseDown, onMouseMove, onMouseOut, onMouseOver, onMouseUp, onReset, onResize, onSelect, onSubmit, onUnload, Form Validation Example. jQuery: Introduction, Syntax, Selectors, Events, Effects, Hide/Show, Fade, Slide, Animate, stop(), Callback, Chaining, HTML, Get, Set, Add, Remove, CSS Classes, css( ), Dimensions. JSON: Introduction, JSON Grammar, JSON Values, JSON Tokens, Syntax, JSON vs XML, Data Types, Objects, Arrays, Creating JSON, JSON Object, Parsing JSON, Persisting JSON, Data Interchange, JSONHTM, JSONP.

**Programs to be completed during lab sessions :****1. Validate a Form Using JavaScript Events**

Create a form with fields like name, email, and age. Write JavaScript code to:

- Ensure no field is left blank
- Display an alert if validation fails
- Use onBlur, onFocus, and onSubmit events

**2. Handle Mouse and Keyboard Events on a Webpage**

Create a webpage where:

- Clicking a button changes a paragraph's text (onClick)
- Hovering over an image changes it (onMouseOver, onMouseOut)
- Pressing a key updates a display box (onKeyDown, onKeyUp)

**3. Create a jQuery-based Image Gallery**

Build a webpage that shows images with buttons to:

- Hide/show them using hide() and show()
- Fade images in/out using fadeIn() and fadeOut()
- Slide images up/down using slideUp() and slideDown()
- Use chaining for combined effects

**4. Create and Manipulate HTML Elements using jQuery**

Create a dynamic to-do list where users can:

- Add new tasks
- Mark tasks as completed

- Remove tasks  
Use jQuery methods like append(), remove(), addClass(), css()

### 5. Load and Display Data from a JSON File

Create a webpage that loads student data (name, course, contact) from a JSON file and displays it in a table. Use JavaScript or jQuery to parse the JSON and dynamically populate the table.

#### Mini-Assignment:

**Title:** "Create a Dynamic Quiz Application using JavaScript, jQuery, and JSON"

#### **Assignment Description:**

Develop a simple **MCQ quiz application** that:

- Loads a set of questions and options from a JSON file
- Allows users to select answers one by one
- Displays score at the end with basic feedback (e.g., "Well done!", "Try again!")
- Uses **jQuery** to dynamically show/hide questions and apply basic animations (fade/slide)

### 10 Text Books

1. HTML 5 Black Book, Covers CSS 3, JavaScript, XML, XHTML, AJAX, PHP and jQuery, 2ed, Dreamtech Press, 2016
2. Web Programming and Interactive Technologies, scriptDemics, StarEdu Solutions India, 2018

PHP: A Beginners Guide, Vikram Vaswani, TMH

### 11 Reference Books

1. HTML, XHTML, and CSS Bible Fifth Edition, Steven M. Schafer, WILEY, 2011
2. Learning PHP, MySQL, JavaScript, CSS & HTML5, Robin Nixon, O'Reilly, 2018
3. PHP, MySQL, JavaScript & HTML5 All-in-one for Dummies, Steve Suehring, Janet Valade Wiley, 2018

Janet Valade Wiley, 2018

### 12 Internal Continuous Assessment: 40%

**Semester End Examination: 60%**

### 13 Continuous Evaluation through:

Practical journal submission, viva, assignments

- Journal Submission : 10 Marks
- Assignments: 10 Marks
- Total: 20 marks

**A semester end practical examination of 2 hours duration for 30 marks as the paper pattern given below.**

*Its compulsory to carry certified journal at the time of practical exam*

### 14 Format of Question Paper: (Semester End Practical Examination : 30 Marks. Duration:2 hours)

Q1: Module 1 (12 marks)  
Q2: Module 2 (12 marks)  
Q.3 Viva (06 Marks)

## Skill Enhancement Course (SEC)

### Name of the Course: Python Programming - Lab

Sr. No.	Heading	Particulars
1	<b>Description the course:</b>	The Python Programming Lab introduces students to the fundamentals of programming using Python, one of the most widely used languages in Artificial Intelligence and Machine Learning. Through hands-on exercises, students will learn problem-solving techniques, control structures, data structures, and basic libraries essential for AI applications. This lab course emphasizes practical coding skills, preparing students for advanced courses in data science, AI, and ML.
2	<b>Vertical:</b>	<b>SEC</b>
3	<b>Type:</b>	<b>Practical</b>
4	<b>Credits:</b>	<b>2 credits</b>
5	<b>Hours Allotted:</b>	<b>30 Hours</b>
6	<b>Marks Allotted:</b>	<b>50 Marks</b>
7	<b>Course Objectives:</b>	<ol style="list-style-type: none"><li>1. To introduce students to Python syntax, semantics, and core programming concepts.</li><li>2. To develop problem-solving skills using control structures, functions, and data structures.</li><li>3. To provide hands-on experience in file handling and error handling in Python.</li><li>4. To build familiarity with Python libraries commonly used in AI/ML workflows (NumPy, Pandas, Matplotlib).</li><li>5. To prepare students to apply Python programming for data analysis and AI-related tasks.</li></ol>
8	<b>Course Outcomes:</b>	<p><b>CO1:</b> Write Python programs using variables, operators, and expressions.</p> <p><b>CO2:</b> Apply conditional statements, loops, and functions to solve problems.</p> <p><b>CO3:</b> Implement and manipulate Python's built-in data structures (lists, tuples, sets, dictionaries).</p> <p><b>CO4:</b> Perform file handling and basic exception handling in Python.</p> <p><b>CO5:</b> Utilize Python libraries (NumPy, Pandas, Matplotlib) for simple data processing and visualization tasks.</p>
9	<b>Modules:-</b>	
	<b>Module 1 (15 hours):</b>	
	<b>Practical 1: Introduction to Python and Data Types</b>	
	<b>Aim:</b> To write Python programs demonstrating the use of variables, data types, and basic input/output operations.	
	<b>Practical 2: Control Structures (Decision Making)</b>	
	<b>Aim:</b> To implement conditional statements (if, if-else, nested if) for solving simple decision-making problems (e.g., finding the largest number, grade calculator).	
	<b>Practical 3: Looping Constructs</b>	
	<b>Aim:</b> To implement iterative statements (for, while, nested loops) in Python for	

	<p>problems like factorial, prime numbers, and pattern generation.</p> <p><b>Practical 4: Functions in Python</b>  <b>Aim:</b> To write user-defined functions in Python and demonstrate function parameters, return values, recursion, and use of built-in functions.</p> <p><b>Practical 5: Data Structures – Lists, Tuples, Sets, and Dictionaries</b>  <b>Aim:</b> To perform operations on Python’s built-in data structures including list slicing, tuple operations, set union/intersection, and dictionary key-value manipulations.</p>	
	<b>Module 2 (15 hours) :</b>	
	<p><b>Practical 6: File Handling</b>  <b>Aim:</b> To read from and write to text/CSV files using Python and demonstrate file operations like open, read, write, append, and close.</p> <p><b>Practical 7: Exception Handling</b>  <b>Aim:</b> To implement error handling in Python using try, except, finally, and demonstrate multiple exception handling with user-defined exceptions.</p> <p><b>Practical 8: NumPy for Array Operations</b>  <b>Aim:</b> To perform array creation, indexing, slicing, reshaping, and mathematical operations using the NumPy library.</p> <p><b>Practical 9: Pandas for Data Handling</b>  <b>Aim:</b> To create and manipulate Series and DataFrames in Pandas, import/export CSV files, and perform basic operations such as filtering, grouping, and sorting.</p> <p><b>Practical 10: Data Visualization using Matplotlib</b>  <b>Aim:</b> To visualize datasets using line charts, bar charts, scatter plots, and histograms with the Matplotlib library.</p> <p><b>Mini Project (Optional / Internal Assessment)</b>  <b>Aim:</b> To apply Python programming concepts and libraries to a small real-world dataset (e.g., Student Marks Analysis, Sales Report Visualization, or COVID-19 Data Insights).</p>	
<b>10</b>	<p><b>Text Books</b></p> <ol style="list-style-type: none"> <li>1. Reema Thareja, Python Programming: Using Problem Solving Approach, Oxford University Press.</li> <li>2. Allen B. Downey, Think Python: How to Think Like a Computer Scientist, O’Reilly.</li> </ol>

## Ability Enhancement Course (AEC)

### Name of the Course: Communication Skills in English I

Sr. No.	Heading	Particulars
1	<b>Description of the course :</b>	This course aims to develop foundational communication skills in English through both theoretical and practical approaches. It begins with an introduction to the nature of communication, including verbal and non-verbal forms, effective writing and speech, and listening techniques. Learners will enhance their reading and listening skills through guided practice using varied texts and listening materials. The second part of the course focuses on speaking and formal writing. It includes training in public speaking, conversational English for different contexts, and practical writing tasks such as job applications, RTI requests, and formal letters. The course is designed to build confidence and competence in real-world communication scenarios.
2	<b>Vertical :</b>	<b>Ability Enhancement Courses(AEC)</b>
3	<b>Type :</b>	<b>Theory</b>
4	<b>Credit:</b>	<b>2 credits</b>
5	<b>Hours Allotted :</b>	<b>30 Hours</b>
6	<b>Marks Allotted:</b>	<b>50 Marks</b>
7	<b>Course Objectives:</b>	<ul style="list-style-type: none"><li>• To enhance the English language proficiency of students by familiarizing them with</li><li>• Listening, Speaking, Reading, and Writing (LSRW) skills</li><li>• To introduce learners to different perspectives of looking at a text or passage</li><li>• To equip learners in the functional aspects of English so that they use the</li><li>• acquired language skills correctly and confidently</li><li>• To guide learners in the effective use of the digital medium of communication</li></ul>
8	<b>Course Outcomes:</b>	After completion of the course, learners would be able to: CO1. Understand and interpret any text they are reading from different perspectives CO2. Arouse the interest of learners in listening to and watching good-quality audio and visual media CO3. Acquire proficiency in the skills of listening, speaking, reading, and writing that will help them meet the challenges of the world CO4. Develop good oral and written skills of communication in the English language
9	<b>Modules:-</b>	
	<b>Module 1:</b>	
	1. Introduction to Communication Skills	
	<ul style="list-style-type: none"><li>• English as an international language and varieties of English</li><li>• Verbal and Non-Verbal Communication</li><li>• Features of Effective Writing Skills</li><li>• Characteristics of an Effective Speech</li><li>• Effective Listening Skills</li></ul>	

This section provides a theoretical base for the following units that are practical in nature.

2. Reading Skills:

- Scanning a text for information
  - Skimming a passage to look for main ideas, understanding text type
- Passages of around 200- 250 words from fables, folk stories, short stories, non-fiction, history, business or environment could be chosen in this section.

3. Listening Skills

- Listening for main ideas/Gist
- Listening for details
- Listening for text organization features
- Listening for tone, accent, style and register

Listening skills in English should be developed through various activities, along with the practice done while teaching in the class.

**Module 2 :**

1. Speaking Skills in English

i) Public Speaking in English

- Introduction
- Characteristics of an effective speech
- Analysis of model speeches
- Drafting and presenting a speech in formal and informal gatherings

ii) Conversation skills

- Opening a conversation
- Introducing oneself in various contexts
- Introducing others formally and informally

2. Formal Writing Skills:

- Job applications with biodata (solicited and unsolicited)
- RTI applications
- Applications for duplicate documents (I-cards / mark sheet, etc.)

## Value Education Course (VEC)

### Name of the Course: Green Technologies

Sr. No.	Heading	Particulars
1	<b>Description the course:</b>	<ul style="list-style-type: none"><li>● <b>Introduction:</b> Green Technologies represent a modern approach to development that emphasizes environmental sustainability, energy efficiency, and eco-friendly innovations. These technologies are designed to minimize negative impacts on the environment while addressing global challenges like climate change, pollution, and resource depletion. They form the backbone of sustainable development in the 21st century, bridging the gap between technological advancement and ecological responsibility.</li><li>● <b>Relevance and Usefulness:</b> In today's world of increasing environmental concerns, Green Technologies have become essential to promote long-term sustainability. They provide practical solutions for reducing carbon footprints, conserving natural resources, and enabling cleaner production processes. Their usefulness spans across industries—helping businesses, governments, and communities to transition toward greener, more responsible practices.</li><li>● <b>Applications:</b> Green Technologies are applied in multiple domains: renewable energy systems like solar, wind, and hydro power; eco-friendly building designs; electric and hybrid vehicles for sustainable transport; smart waste management systems; and innovative practices like carbon capture and recycling. These applications directly contribute to mitigating environmental damage while supporting economic growth.</li><li>● <b>Interest and Connection with Other Courses:</b> The study of Green Technologies is intellectually stimulating, combining environmental science, engineering, and innovation. It connects seamlessly with courses in environmental studies, energy systems, computer science (through AI-enabled sustainability solutions), and management (via corporate social responsibility and sustainability reporting). Its interdisciplinary nature makes it a valuable field of study for students across diverse academic streams.</li><li>● <b>Demand in the Industry:</b></li></ul>

		<p>With governments and industries worldwide committing to sustainable development goals (SDGs), there is a rapidly growing demand for professionals skilled in Green Technologies. Companies in energy, manufacturing, automotive, construction, and IT are actively seeking expertise to meet green compliance standards and develop innovative solutions for sustainability.</p> <ul style="list-style-type: none"> <li> <b>Job Prospects:</b>            Graduates with knowledge of Green Technologies are well-positioned for careers in renewable energy companies, environmental consulting firms, sustainable architecture, transportation industries, and policy-making organizations. Job roles may include sustainability analyst, renewable energy engineer, green building consultant, and environmental policy advisor. The global push for greener economies ensures that these opportunities will only continue to expand.         </li> </ul>
2	<b>Vertical:</b>	VEC
3	<b>Type:</b>	Theory
4	<b>Credits:</b>	2 credits ( 1 credit = 15 Hours for Theory in a semester )
5	<b>Hours Allotted:</b>	30 Hours
6	<b>Marks Allotted:</b>	50 Marks
7	<p><b>Course Objectives:</b></p> <ol style="list-style-type: none"> <li>To introduce students to the concepts and need of green technologies for sustainable development.</li> <li>To familiarize students with renewable energy systems and their applications.</li> <li>To understand eco-friendly practices in waste management, green buildings, and transportation.</li> <li>To encourage adoption of sustainable and responsible technologies in daily life and industry.</li> </ol>	
8	<p><b>Course Outcomes:</b></p> <p>CO1: Explain the need and significance of green technologies in addressing environmental challenges.</p> <p>CO2: Demonstrate understanding of renewable energy systems and sustainable practices.</p> <p>CO3: Analyze the role of green innovations in waste management, transportation, and urban planning.</p> <p>CO4: Apply eco-friendly approaches to promote sustainable development in personal and community life.</p>	
9	<p><b>Modules</b></p> <p><b>Module 1: Introduction to Green Technologies(15 Hours)</b></p> <ol style="list-style-type: none"> <li>Introduction to Green IT: need, scope, and importance</li> <li>Environmental impact of IT: energy consumption, carbon footprint, e-waste</li> <li>Sustainable IT practices – Reduce, Reuse, Recycle</li> </ol>	

4. Energy-efficient hardware and software
5. Low-power processors, green devices
6. Power management in OS & networks
7. Green coding & algorithm optimization
8. E-waste management and eco-labels (Energy Star, EPEAT, ISO 14001)

**Module 2: Applications of Green Technologies (15 Hours)**

1. Green Data Centers: virtualization, cloud computing, server consolidation, energy-efficient cooling
2. Green Networking: smart routing, bandwidth optimization, IoT for sustainability.
3. Role of IT in smart grids, smart cities, and environmental monitoring
4. Case studies: Google, Microsoft, Infosys, TCS initiatives.
5. Future trends: carbon-aware computing, AI & Blockchain for sustainability, edge computing for energy efficiency

Q.2	Module 2	Any 2 out of 4	10
Q.3	Module 1 & 2	Any 2 out of 4	10

## Name of the Course: Indian Knowledge System

Sr. No.	Heading	Particulars
1	<b>Description the course</b> :	This course offers a comprehensive introduction to the Indian Knowledge System (IKS), exploring its core principles, historical context, and contemporary relevance. It examines the impact of colonial education policies and emphasizes the need to revisit ancient Indian traditions. The course highlights traditional Indian entrepreneurship through handloom, khadi, tribal handicrafts, herbal products, and culturally rooted food ventures. It also showcases sustainable practices like the use of clay bottles, banana leaf plates, and the repair-and-reuse culture. Students will further explore key domains of IKS such as Ayurveda, ancient sports, astronomy, yoga, traditional banking, trade, commerce, and governance models from texts like the Arthashastra.
2	<b>Vertical :</b>	IKS
3	<b>Type :</b>	Theory
4	<b>Credit:</b>	2 credits
5	<b>Hours Allotted :</b>	30 Hours
6	<b>Marks Allotted:</b>	50 Marks
7	<b>Course Objectives:</b> The student should be able to:	<ol style="list-style-type: none"> <li>1. To sensitize the students about context in which they are embedded i.e. Indian culture and civilization including its Knowledge System and Tradition.</li> <li>2. To help student to understand the knowledge, art and creative practices, skills and values in ancient Indian system.</li> <li>3. To help to study the enriched scientific Indian heritage.</li> <li>4. To introduce the contribution from Ancient Indian system &amp; tradition to modern science &amp; Technology.</li> </ol>
8	<b>Course Outcomes:</b>	CO1. Learner will understand and appreciate the rich Indian Knowledge Tradition CO2. Learner will understand the contribution of Indians in various fields CO3. Learner will experience increase subject-awareness and self-esteem CO4. Learner will develop a comprehensive understanding of how all knowledge is ultimately intertwined
9	<b>Module:</b> Module 1: (15 Hours)	<ol style="list-style-type: none"> <li>1. Introduction to IKS: What is knowledge System, Characteristic Features of Indian Knowledge System</li> <li>2. Why IKS? Macaulay's Education Policy and its impact, Need of revisiting Ancient Indian Traditions</li> <li>3. IKS and Entrepreneurship: Handloom, Khadi, Tribal Handicrafts and Herbal Products, Food-based start-ups rooted in tradition</li> <li>4. Sustainable Indian Practices: Clay bottles, Banana leaf plates, Cloth Bags-Repair</li> </ol>

culture (Reuse, Patchwork, Jugaad)

Module 2: (15 Hours)

1. Medicine (Ayurveda)
2. Ancient Sports
3. Astronomy
4. Yoga and Wellbeing
5. Banking
6. Trade and Commerce
7. Art of Governance (Arthashastra)

## Co-Curricular Course (CC)

### Name of the Course: Fitness and Sports I

Sr. No.	Heading	Particulars
1	<b>Description the course :</b> <b>Including but Not limited to :</b>	<p>India is growing rapidly as a global super-power. To face the challenges of the century and to keep up with the pace of the world, maintaining health is of prime importance. Giving thrust to healthy society, Physical Education, Sports, Health &amp; fitness and Yoga are of great significance in today's world. The Government of India insists on Physical Fitness, Mental Health and Overall Development of Personality for every citizen.</p> <p>However, creating efficient and skilled human resource in the field of Physical Education, Sports and Yoga is identified as the need of the hour. Thus, the Governments of India and Government of Maharashtra have included Physical Education, Sports and Yoga as a key area under the NEP 2020.</p>
2	<b>Vertical :</b>	Co-Curricular
3	<b>Type :</b>	Activity Based
4	<b>Credit:</b>	2 credits
5	<b>Hours Allotted :</b>	30 Hours
6	<b>Marks Allotted:</b>	50 Marks
7	<b>Course Objectives:</b>  The student should be able to :	<ul style="list-style-type: none"><li>• <b>To understand the core components of physical fitness</b> and learn basic techniques for assessing and improving personal health and endurance.</li><li>• <b>To gain knowledge of various sports classifications, rules, and techniques</b> for both individual and team-based indoor and outdoor games.</li><li>• <b>To develop life skills such as discipline, teamwork, and leadership</b> through active</li></ul>
8	<b>Course Outcomes:</b>	<ul style="list-style-type: none"><li>• <b>Understanding of physical fitness components</b> and apply appropriate assessment techniques like BMI, flexibility, and endurance tests.</li><li>• <b>Identify and explain the rules, techniques, and classifications</b> of major indoor and outdoor sports, including both individual and team games.</li><li>• <b>Exhibit improved teamwork, discipline, and personal growth</b> through participation in physical activities and application of sportsmanship values.</li></ul>

9	<p><b>Module :</b></p> <p>This module introduces the fundamentals of physical fitness, including strength, endurance, flexibility, body composition, and cardiovascular health. It emphasizes the importance of fitness for students and explains basic assessment methods like BMI and endurance tests. It also covers the classification of sports into indoor/outdoor and individual/team. Basic rules and techniques of popular games like cricket, football, volleyball, and athletics are explained. The module highlights how sports encourage discipline, teamwork, and contribute to personality development.</p>
10	<p><b>Reference Books:</b></p> <ol style="list-style-type: none"> <li>1. Uppal, A.K. (1992). Physical Fitness. New Delhi: Friends Publication.</li> <li>2. Muller, J.P. (2000).
